## RFTB202 Turbine Flowmeter

- ▶ High pressure
- ▶ Low pressure loss
- ▶ High repeatability and accuracy
- ▶ Pulse / analog output selectable
- ▶ Fast response time

Fluid flowing through RFTB202 push the rotor to revolve. As the rotor blade pass the pickoffs, generate electrical pulses which frequency is proportional to the flow rate. The revolutions per minute and the K-factor (number of pulses/Gallon) make it possible to obtain the flow volume passing through the unit.

RFTB202 series are used to measure medium or lower viscosity media, such as water, light fuel, solvent, hydraulic oil, lubricating oil etc.

## Specifications

<b>Nominal Diameter</b>	DN4 to DN40
<b>Applicable Medium</b>	Medium or lower viscosity liquids
<b>Accuracy</b>	Better than $\pm 1\%$ of reading, $\pm 0.5\%$ and $\pm 0.2\%$ selectable
<b>Repeatability</b>	$\pm 0.1\%$ of reading
<b>Pressure Rating</b>	MAX. 420bar
<b>Ambient Temperature</b>	-40 to 85°C
<b>Medium Temperature</b>	-40 to 120°C, -200 to 400°C (High temperature type)
<b>Materials</b>	
Body / Rotor Support	304 stainless steel (316 stainless steel optional)
Turbine	Stainless steel
Shaft	Tungsten carbide/ceramic
Bearing	Stainless steel ball bearing, Tungsten carbide/ceramic journal bearing
<b>Process Connection</b>	BSPP female thread, NPT female thread

## Applications

- ▶ Petrochemical/energy industry
- ▶ Hydraulics/lubrication system
- ▶ Oil and Gas
- ▶ Test systems
- ▶ Water treatment

## Parameter Table

Type	Flow Range(L/Min.)		Max. Pressure (bar)	DN (mm)	Process Connection BSPP/NPT	Filtration(micron)	
	Magnetic Pickoff	Encode Pickoff				Journal Bearing	Ball Bearing
RFTB202-GF/NF-4.5L	0.6 to 4.5	0.6 to 4.5	420	4	G1/4" or 1/4"NPT	75	--
RFTB202-GF/NF-10L	1.6 to 10	0.8 to 10	420	6	G1/4" or 1/4"NPT	75	--
RFTB202-GF/NF-20L	3 to 20	1.5 to 20	420	10	G3/8" or 3/8"NPT	100	30
RFTB202-GF/NF-100L	10 to 100	5 to 100	420	15	G1/2" or 1/2"NPT	150	50
RFTB202-GF/NF-130L	13 to 130	6 to 130	420	20	G3/4" or 3/4"NPT	150	50
RFTB202-GF/NF-170L	17 to 170	8 to 170	420	25	G1" or 1"NPT	150	70
RFTB202-GF/NF-250L	25 to 250	12 to 250	420	32	G1-1/4" or 1-1/4"NPT	200	100
RFTB202-GF/NF-320L	32 to 320	16 to 320	420	40	G1-1/2" or 1-1/2"NPT	200	100

## Pickoffs & Amplifiers

RFTB202 can be integrated with several different pickoffs, preamplifiers and signal conditioners, such as magnetic pickoffs, encode pickoffs, linear correction preamplifiers, smart control units, to meet specific measurement needs.

### Pickoffs

Magnetic pickoffs can sense a ferrous rotor and is ideal for use in all types of Reliant turbine flowmeters. Options include cryogenic, high temperature and explosion proof.

Encode pickoffs offer low speed response, no drag, large sensing distance and can sense non-ferrous metals like aluminum or nonmagnetic stainless steel in addition to ferrous metal. Unlike magnetic pickoff, a carrier frequency pickoff is not a passive device and requires coupling with a signal conditioners/preamplifier. These devices produce a square wave output versus the analog sine wave of the magnetic pickoff.

### Amplifiers

---

Reliant has developed a line of preamplifiers and signal conditioners for installation with our pickoffs. Our offerings include preamplifiers in several different configurations.

- Pulse output amplifier - Output with square signal, proportional to the flow rate.
- Amplifier with linearized pulse output - Extending the measuring range and with multi-point linearization, with square wave output, frequency proportional to the flow rate.
- Amplifier with analog output - Current analog output or voltage analog output, such as 0 to 10V, 0 to 5V, 0 to 20mA, 4- 20mA.
- Amplifier with linearized analog output - Extended measuring range and with multi-point linearization, analog output.
- Intelligent flow computer - Digital display, analog output / communication RS485/ switch output optional.

## Bearings

Bearings are available in three types, stainless steel ball, tungsten carbide journal sleeve and ceramic journal sleeve. Ceramic bearing eliminates adhesive wear and perform well in low or non-lubricating liquids found in cryogenic fluids and water. Ball bearings have the least amount of drag, thus provide the widest capable flow range. Journal bearings create more drag, therefore reducing the turndown capability of the flowmeter.

- **Tungsten carbide journal bearing** - Applicable to low or non-lubricating media, narrow turndown ratio of the flow meter relative with ball bearing.
- **Stainless steel ball bearing** - Applicable to lubricating media, with low friction, lower limit for flow meter and wider turndown ratio.
- **Ceramic journal bearing** - Self-lubricating, applicable to non-lubricating media such as liquid nitrogen, narrow turndown ratio of the flow meter relative with ball bearing.

## Electronics

VS - Magnetic pickoffs with pulse output amplifier

RS - Encode pickoffs with pulse output amplifier

<b>Power Supply</b>	12 to 30VDC
<b>Current Consumption</b>	8mA
<b>Outputs</b>	NPN OC output, NPN OC output+pull-up resistor
<b>Reverse Polarity Proof</b>	Yes
<b>Short-circuit Proof</b>	Yes
<b>Operating Temperature</b>	-40 to 120°C
<b>Ambient Temperature</b>	-40 to 85°C
<b>Electrical Connection</b>	M12x1plug DIN43650-A plug (solenoid plug)
<b>Protection Class</b>	M12X1plug: IP67 DIN43650-A plug: IP65

VH - High temperature magnetic pickoffs with pulse output amplifier

RH - High temperature Encode pickoffs with pulse output amplifier

<b>Ambient Temperature</b>	-40 to 85°C
<b>Operating Temperature</b>	VH -200 to 400°C RH -40 to 200°C
